1. About this document

1.1 Function

This operating instructions manual provides all the information you need for the mounting, set-up and commissioning to ensure the safe operation and disassembly of the safety switchgear. The operating instructions must be available in a legible condition and a complete version in the vicinity of the device.

1.2 Target group: authorised qualified personnel

All operations described in this operating instructions manual must be carried out by trained specialist personnel, authorised by the plant operator only.

Please make sure that you have read and understood these operating instructions and that you know all applicable legislations regarding occupational safety and accident prevention prior to installation and putting the component into operation.

The machine builder must carefully select the harmonised standards to be complied with as well as other technical specifications for the selection, mounting and integration of the components.

1.3 Explanation of the symbols used

Information, hint, note:

This symbol indicates useful additional information.

Caution: Failure to comply with this warning notice could lead to failures or malfunctions.

Warning: Failure to comply with this warning notice could lead to physical injury and/or damage to the machine.

1.4 Appropriate use

The Schmersal range of products is not intended for private consumers.

The products described in these operating instructions are developed to execute safety-related functions as part of an entire plant or machine. It is the responsibility of the manufacturer of a machine or plant to ensure the correct functionality of the entire machine or plant.

The safety switchgear must be exclusively used in accordance with the versions listed below or for the applications authorised by the manufacturer. Detailed information regarding the range of applications can be found in the chapter "Product description".

1.5 General safety instructions

The user must observe the safety instructions in this operating instructions manual, the country specific installation standards as well as all prevailing safety regulations and accident prevention rules.

Further technical information can be found in the Schmersal catalogues or in the online catalogue on the Internet: products.schmersal.com.

The information contained in this operating instructions manual is provided without liability and is subject to technical modifications. There are no residual risks, provided that the safety instructions as well as the instructions regarding mounting, commissioning, operation and maintenance are observed.

1.6 Warning about misuse

In case of improper use or manipulation of the safety switchgear, personal hazards or damages to machinery or plant components cannot be excluded. The relevant requirements of the standard EN ISO 14119 must be observed.

1.7 Exclusion of liability

We shall accept no liability for damages and malfunctions resulting from defective mounting or failure to comply with this operating instructions manual. The manufacturer shall accept no liability for damages resulting from the use of unauthorised spare parts or accessories.

For safety reasons, invasive work on the device as well as arbitrary repairs, conversions and modifications to the device are strictly forbidden, the manufacturer shall accept no liability for damages resulting from such invasive work, arbitrary repairs, conversions and/or modifications to the device.

2. Product description

2.1 Ordering code

This operating instructions manual applies to the following types:

EX-BNS 250-12Z-2187-3GD

2.2 Special versions

For special versions, which are not listed in the ordering code below 2.1, these specifications apply accordingly, provided that they correspond to the standard version.

2.3 Determination and use for functional safety in accordance with the Machinery Directive.

The safety sensor can be used for monitoring the position of movable guards and flaps.

The safety switches are used for applications, in which the hazardous situation is terminated without delay when the safety guard is opened.

The user must evaluate and design the safety chain in accordance with the relevant standards and the required safety level.

The safety switchgears are classified according to EN ISO 14119 as type 4 interlocking devices.

The entire concept of the control system, in which the safety component is integrated, must be validated to the relevant standards.

Only the entire system consisting of the safety sensor (EX- BNS 250), the actuator (EX- BPS 250) and the safety-monitoring module (e.g.. SRB(-E) / PROTECT-SELECT / PSC1) meets the requirements of the standard EN 60947-5-3.

2.4 Determination and use for explosion protection

The components can be used in potentially explosive atmospheres of Zone 2 and 22 equipment category 3GD. The installation and maintenance requirements to the standard series 60079 must be met. For the actuation of the safety sensors, only the EX-BPS 250 actuator can be used.

Explosion protection is achieved with ignition protection types Ex nC (hermetically sealed device) and Ex tc (protection through enclosure).

Conditions for safe operation

The specific ambient temperature range must be observed. The user must provide for a protection against the permanent influence of UV rays.

2.5 Technical Data

Marking in accordance with the ATEX Directive:	Ⓔ II 3GD
Marking in accordance with standards:	
- EX-BNS 250:	Ex nC IIC T6 Gc, Ex tc IIIC T80°C Dc
- EX-BPS 250:	Ex h IIC T6 Gc, Ex h IIIC T80°C Dc
Applied standards:	EN 60947-5-3, EN IEC 60079-0, EN IEC 60079-15, EN 60079-31, EN ISO 80079-36, EN ISO 80079-37
Design:	rectangular
Enclosure:	glass-fibre reinforced thermoplastic
Protective enclosure:	Stainless steel
Max. impact energy:	without protective enclosure: 1 J with protective enclosure: 7 J
Coding level according to EN ISO 14119:	low
Degree of protection:	IP67
Connection:	Boflex cable
Cable section:	6 x 0.25 mm ²
Operating principle:	magnetic
Actuating magnet:	EX-BPS 250, coded
Assured switching distance s_{ao} :	4 mm
Assured switch-off distance s_{of} :	14 mm
Max. switching voltage:	24 VDC
Switching current:	max. 100 mA
Switching capacity:	max. 1 W
Required short-circuit current:	100 A
Ambient temperature:	-25 °C ... +70 °C
Storage and transport temperature:	-25 °C ... +70 °C
Max. switching frequency:	5 Hz
Resistance to shock:	30 g / 11 ms
Resistance to vibration:	10 ... 55 Hz, amplitude 1 mm

2.6 Safety classification

Standards:	EN ISO 13849-1
Safety contacts:	
- NC / NO combination:	S21-S22 and S13-S14
Intended structure:	
- 2-channel usage:	usable to cat. 4 / PL e with suitable logic unit
B_{10D} NC contacts at 20 % contact load:	25,000,000
B_{10D} NO contacts at 20 % contact load:	25,000,000
Mission time:	20 years

$$MTTF_D = \frac{B_{10D}}{0,1 \times n_{op}} \quad n_{op} = \frac{d_{op} \times h_{op} \times 3600 \text{ s/h}}{t_{cycle}}$$

(Determined values can vary depending on the application-specific parameters h_{op} , d_{op} and t_{cycle} as well as the load.)

If multiple safety components are wired in series, the Performance Level to EN ISO 13849-1 will be reduced due to the restricted error detection under certain circumstances.

3. Mounting

3.1 General mounting instructions

Mounting is only permitted in a de-energised state.

During fitting, the requirements of EN ISO 14119 must be observed.

- Do not use the sensor and the actuator as a mechanical backstop
- Any mounting position, provided that the active surfaces are opposite
- The protective enclosure must be flush with the rear wall of the safety sensor.
- The screw-on surface or the rear panel of the safety sensor must be flush with the upper edge of sheet metal of the protective enclosure (see dimensional drawing of protective enclosure). The safety sensor must be covered from the front by the protective enclosure and from the rear by the screw-on surface.
- The minimum screw-on torque of the protective enclosure is 1.2 Nm.
- Fasten the actuator to the guard in such a way that it cannot be detached.
- Ensure the safety sensor is mounted on a flat surfaces to avoid tensile stresses that could damage the sensor or lead to varying switching distances
- Do not install the safety sensor and the actuator in strong magnetic fields
- If possible, do not mount the sensor and the actuator on ferromagnetic material. The use of a non-magnetic spacer of at least 5 mm thick must be used. The use of non-magnetic fixing screws is recommended also.
- Do not subject the safety sensor and actuator to extreme vibrations and shocks.
- Keep away from metal chips
- The mounting distance between two sensors should always be at least 50 mm.

For mechanical protection, the safety sensor must be fitted with the protective enclosure (in the scope of delivery).

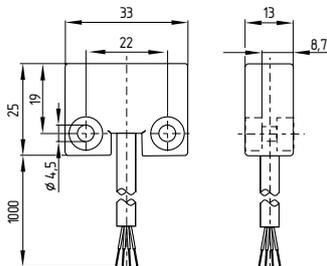

The actuator must be permanently fitted to the safety guards and protected against displacement by suitable measures (tamperproof screws, gluing, drilling of the screw heads).

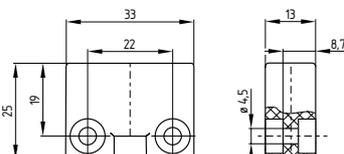

3.2 Dimensions

All measurements in mm.

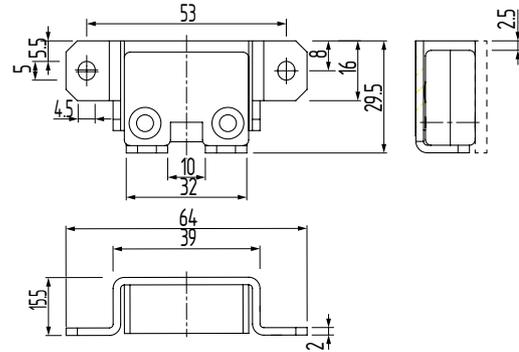

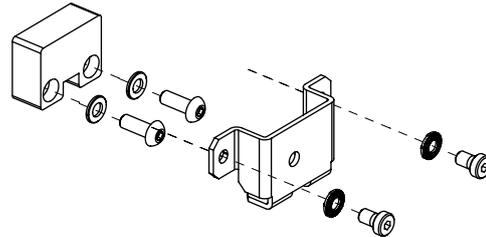

Safety sensor

Actuator

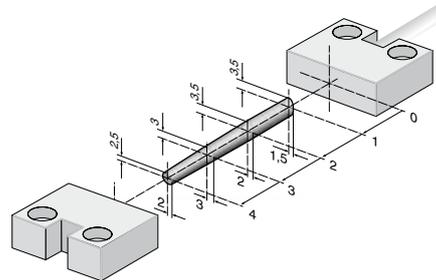

Protective enclosure

3.3 Axial misalignment

A horizontal and vertical misalignment of the safety sensor and the actuator is tolerated. The possible misalignment depends on the distance of the active surfaces of the sensor and the actuator. The sensor remains active within the tolerance range.

The specified switching distances refer to oppositely mounted safety sensors and actuators.

EX-BPS 250

Assured switching distance: $s_{ao} = 4 \text{ mm}$

Assured switch-off distance: $s_{ar} = 14 \text{ mm}$

4. Electrical connection

4.1 General information for electrical connection

The electrical connection may only be carried out by authorised personnel in a de-energised condition.

The safety sensors must be wired in accordance with the specified wire colours.

4.2 Contact Options

The contact position shows the actuated sensor function when the safety guard is closed.

1 NO / 2 NC

EX-BNS 250-12Z-2187-3GD

GY 13 — 14 PK
GN 21 — 22 YE
WH 31 — 32 BN

4.3 Connector

For safety-monitoring modules with antivalent inputs, the wires of the safety sensor must be wired as follows:

NO contacts: GY (13) und PK (14) at the "NO input" of the safety-monitoring module

NC contacts: GN (21) und YE (22) at the "NC input" of the safety-monitoring module

NC contacts: WH (31) und BN (32) can be used for signalling purposes.

In this way, the coding of the safety sensor is ensured.

Information for the selection of suitable safety-monitoring modules can be found in the Schmersal catalogues or in the online catalogue on our website: products.schmersal.com.

Connecting multiple sensors to one safety-monitoring module is technically possible. To connect multiple safety sensors (check if authorised!), the NC contacts of channel 1 are wired in series and the NC contacts of channel 2 are wired in series. The channels 1 and 2 must be wired separately to the safety-monitoring module.

5. Set-up and maintenance

5.1 Functional testing

The safety function of the safety components must be tested. The following conditions must be previously checked and met:

1. The installation is executed according to the instructions
2. The connection is executed correctly
3. The safety component is not damaged
4. The system is free of dirt and soiling (in particular metal chips)
5. Check cable entry and connections in a de-energised condition

5.2 Maintenance

In the case of correct installation and adequate use, the safety sensor features maintenance-free functionality. A regular visual inspection and functional test, including the following steps, is recommended:

- Check safety sensor, protective enclosure and actuator for tight fit.
- Remove possible metal chips
- Check the cable for damage.
- Check cable entry and connections in de-energised condition

Adequate measures must be taken to ensure protection against tampering either to prevent tampering of the safety guard, for instance by means of replacement actuators.

Damaged or defective components must be replaced.

6. Disassembly and disposal

6.1 Disassembly

The safety switchgear must be disassembled in a de-energised condition only.

6.2 Disposal

The safety switchgear must be disposed of in an appropriate manner in accordance with the national prescriptions and legislations.

7. EU Declaration of conformity

EU Declaration of conformity		
Original	K.A. Schmersal GmbH & Co. KG Möddinghofe 30 42279 Wuppertal Germany Internet: www.schmersal.com	
We hereby certify that the hereafter described components both in their basic design and construction conform to the applicable European Directives.		
Name of the component:	EX-BNS 250	EX-BPS 250
Type:	see ordering code	
Marking:	EX-BNS 250 Ⓢ II 3G Ex nC IIC T6 Gc Ⓢ II 3D Ex tc IIIC T80°C Dc	EX-BPS 250 Ⓢ II 3G Ex h IIC T6 Gc Ⓢ II 3D Ex h IIIC T80°C Dc
Description of the component:	Coded safety-sensor with magnetic operating principle in combination with the SRB(-E) / PROTECT-SELECT / PSC1 safety-monitoring modules from Schmersal or an equivalent safety-oriented control system fulfilling the requirements of the EN 60947-5-3.	
Relevant Directives:	Machinery Directive Explosion Protection Directive (ATEX) RoHS-Directive	2006/42/EC 2014/34/EU 2011/65/EU
Applied standards:	EN 60947-5-3:2013 EN IEC 60079-0:2018 EN IEC 60079-15:2019 EN 60079-31:2014 EN ISO 80079-36:2016 EN ISO 80079-37:2016	
Person authorised for the compilation of the technical documentation:	Oliver Wacker Möddinghofe 30 42279 Wuppertal	
Conformity with the explosion protection directive 2014/34/EU (ATEX) is declared by the manufacturer without involving a test center.		
Place and date of issue:	Wuppertal, May 10, 2022	
EX-BNS250-G-EN		
	Authorised signature Philip Schmersal Managing Director
