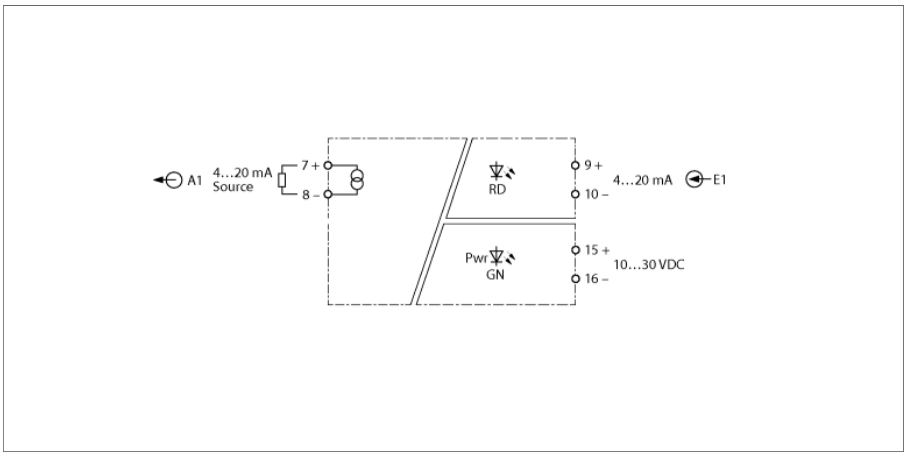
Analog Signal Isolator
1-channel
IM12-AO01-1I-1I-H0/24VDC



The 1-channel IM12-AO01-1I-1I-H0/24VDC signal isolator is designed to transmit the normalized current signal galvanically isolated 1:1. In addition to the analog signal, digital HART® communication signals can also be transmitted bidirectionally. Typical applications are, for example, the control of I/P converters or indicators.

The green LED indicates operational readiness. The device can detect a wire break or short circuit on the field side, the input then switches to a high impedance state. An error in the input circuit causes the red LED to flash according to NE44.

The device can be used in safety circuits up to SIL2 (high and low demand according to IEC 61508) and meets the requirements of the NE21. It is equipped with removable screw terminals.

The device is equipped with removable screw terminals.

- Input circuit monitored for wire break and short circuit
- Complete galvanic isolation
- HART transparent
- Removable screw terminals
- ATEX use in Zone 2, cUL
- SIL 2
