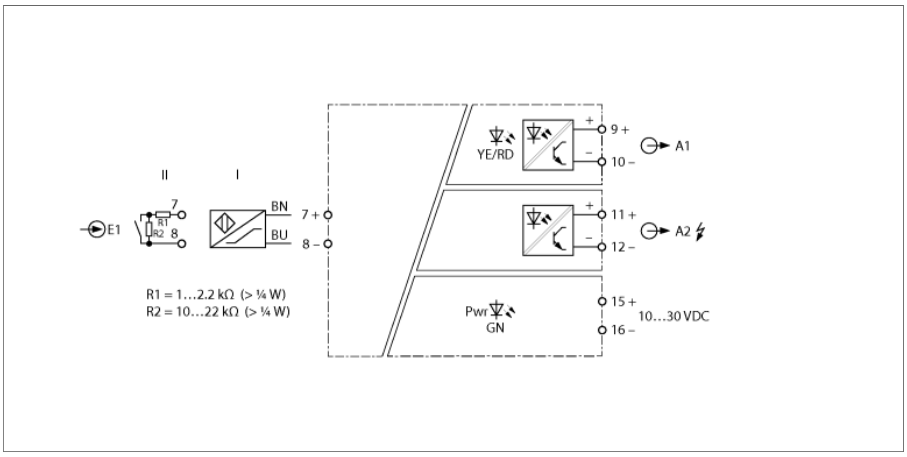
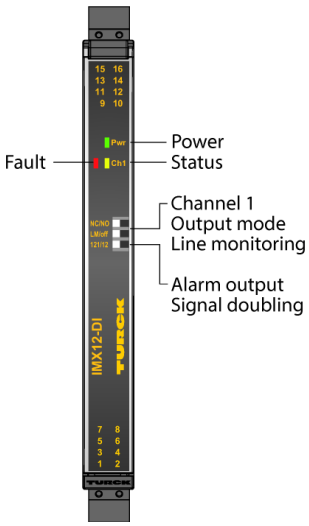
Isolating switching amplifier
1-channel
IM12-DI03-1S-2T-S/24VDC/CC





Sensors according to EN 60947-5-6 (NAMUR) or potential-free contacts can be connected to the IM12-DI03-1S-2T-S/24VDC/CC isolating switching amplifier. The device can be installed in zone 2. The device can be switched between 1-channel operation with signal doubling or 1-channel operation with alarm message output using DIP switches. The output circuits are equipped with two potential-free transistors. The device complies with the requirements of NE21.

The devices feature DIP switches on the front. This allows to select between the output mode, the input circuit monitoring, as well as toggle between signal duplication and 1-channel operation. When using mechanical contacts, either line monitoring must be switched off or the contact must be wired with resistors (see wiring diagram).

The green LED indicates operational readiness. An error in the input circuit causes the red LED to flash according to NE44. Then, the transistor of the corresponding output circuit locks.

The device can be used in safety circuits up to SIL2 (high and low demand according to IEC 61508).

The device is equipped with removable spring type terminals.

- Transistor output (≤ 10 kHz)
- Switchable between: Alarm output or signal doubling
- Output mode adjustable (open-circuit/closed current mode)
- Input circuits monitored for wire break/ short circuit (ON/OFF switchable)
- Complete galvanic isolation
- Input reverse-polarity protected
- Removable spring type terminals
- ATEX use in Zone 2, cUL
- SIL 2
