Functional principle

Ultrasonic sensors capture a multitude of objects contactlessly and wear-free with ultrasonic waves. It does not matter whether the object is transparent or opaque, metallic or non-metallic, firm, liquid or powdery. Even environmental conditions such as spray, dust or rain hardly affect their function. The sonic cone diagram indicates the detection range of the sensor. In accordance with standard EN 60947-5-2, quadratic targets in a range of sizes (20 × 20 mm, 100 × 100 mm) and a round rod with a diameter of 27 mm are used.

Important: The detection ranges for other targets may differ from those for standard targets due to the different reflection properties and geometries.

Mounting instructions

Mounting instructions/Description

Setting the switching point The ultrasonic sensor features a switching output with a teachable switching point. The yellow LED indicates whether the object is

within the switching range of the sensor.

One switching point is taught. This must be within the detection range. In this operating mode the background is suppressed.

Simple Teach-In

Place object at the end of the switching range Pin 2/seal the white core against Ub for 2...7 s • Return to normal operating mode after 17 s or more.

After a successful teach-in, the yellow LED flashes 3 times and the sensor runs automatically in normal operating mode.

LED response

In normal operating mode, the LED signals the switching state of the sensor.
