#### **Features**

- Male M12 × 1, 4-pin
- ■Metal housing, ZN, black
- ■Protection class IP67
- Sensitivity adjusted via potentiometer
- Operating voltage 10...30 VDC
- ■NPN switching output
- Light/dark operation

#### Wiring diagram

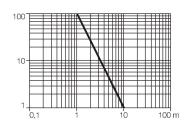

## Functional principle

Opposed mode sensors consist of an emitter and receiver. They are installed opposite each other so that the light from the emitter is aimed directly at the receiver. When an object interrupts or weakens the light beam, the sensor switches. Opposed mode sensors are the most reliable photoelectric sensors for detection of opaque targets. An excellent contrast between light and dark conditions and an extremly high excess gain are typical of this sensing mode, thus allowing operation over larger distances and under difficult conditions.
