

# K50RPFF100GREQP Pick-to-Light - Placement Sensor Diffuse Mode Sensor with Fixed-field Background Suppression

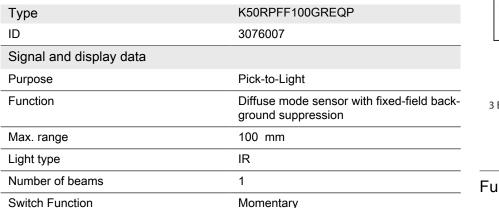

Technical data

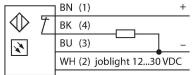

#### **Features**

- Protection class IP67
- Cable with M12 × 1 male connector, 4-pin, 150 mm
- Fixed background suppression at 100 mm
- Job light: green
- Mispick: red
- ■Actuation: not signalled
- Operating voltage 12...30 VDC
- ■PNP switching
- ■NC contact

## Wiring diagram

Purpose	Pick-to-Light	
Function	Diffuse mode sensor with fixed-field back- ground suppression	
Max. range	100 mm	
Light type	IR	
Number of beams	1	
Switch Function	Momentary	
Features of color 1	Green, Permanently on	
Features of color 2	Red	
Special features	I/O module-compatible Wash down	
Electrical data		
Operating voltage	1230 VDC	
DC rated operational current	≤ 150 mA	
Max. current consumption per color	75 mA	
Output function	NC contact, PNP	
Input type	PNP	
Response time typical	< 3 ms	
Mechanical data		
Design	Dome, K50	
Dimensions	Ø 50 x 56.8 mm	
Housing material	Plastic, PC, Black	
Window material	Polycarbonate, diffuse	

## Functional principle

The K50 pick-and-place sensor is suitable for many mounting and component placement applications. The green work light or other signal lights are reflected perfectly by the entire dome (depending on the version). The transistor output can be easily connected to a system control, which is programmed for a special task sequence. The work light of the sensor is located in or next to every bin at the operator's workstation and indicates: 1. The bins with the components to be picked up for a particular work step and 2. the sequence in which the components have to be picked up. If the operator removes a part from the bin, the K50 detects the hand in the bin and sends a signal to the control unit. The system then checks if the correct component has been picked up and - depending on the configuration - switches the corresponding work light off and the next one on, according to the assembly sequence. The work sequence control leads to increased efficiency, improved quality control and reduces rework and testing expenses. The term work light therefore refers to the visual indicator of the bin from which a part should be removed next. The actuation indicator confirms the removal with a different

## Technical data
