

# excom I/O System

## Output Module, Analog, 4-channel

### AO401EX

The output module AO401Ex is used for the connection of intrinsically safe analog actuators such as control valves or process indicators.

The module features protection class Ex ib IIC and can be mounted in zone 1 in combination with the excom system. The explosion protection category of the outputs is Ex ia IIC resp. Ex iaD. The outputs are galvanically isolated from each other.

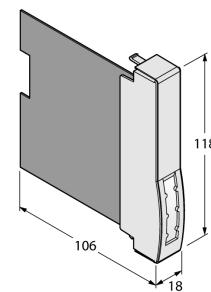

HART-compatible transducers can be connected to the module. The field device can thus be parametrized directly at the terminals on the DIN rail with a licensed modem. Additional impedance in the circuit is not necessary.

The host system transmits a digitized control value 0...21000 (independent of the parametrized measuring range). This raw value is then transformed by the AO401Ex into a signal between 0...21 mA.

- Output module for the connection of analog actuators
- Complete galvanic isolation
