

Level controller 1-channel MS91-12-R (UNT)

The 1-channel level control MS91-12-R monitors and regulates conductive liquid levels (II). As a dual level regulator, it can be used to control pumps and solenoid valves (I). As monitoring device it is designed for run-dry or over flow protection.

The sensitivity (liquid resistance) is adjustable between 0.1 ... 100 kΩ. One of the four sensitivity ranges is selected by the terminal configuration. Fine adjustment of the switch point within the selected range is achieved with a front cover potentiometer. The level controller not only provides optimum reliability in differentiating liquids, it is also suited for the distinction between foam and liquid.

The adjustable switch-on and switch-off delay is very important for turbulent liquid levels. A delay time between 0.1 ... 15 s can be set via the potentiometer on the front.

Two parallelly operating relay outputs with one changeover contact each are provided to output the switching commands. The output configuration of both outputs can be changed from NC mode (no bridge between terminal 15/16) to NO mode (with bridge between terminals 15/16).

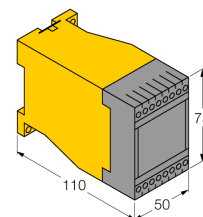

The switching status is indicated by a yellow LED.

The switching status of the output is indicated by a yellow LED and operational readiness by a green LED.
