## Output Module, Analog, 4-channel

### AO40-N

The output module AO40-N is used for the connection of analog actuators such as control valves or process indicators.

The outputs are galvanically isolated from each other.

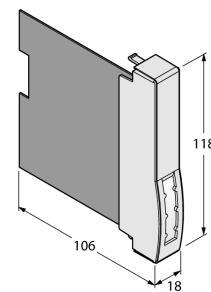

HART-compatible transducers can be connected to the module. The field device can thus be parametrized directly at the terminals on the DIN rail with a licensed modem. Additional impedance in the circuit is not necessary.

The host system transmits a digitized control value 0...21000 (independent of the parametrized measuring range). This raw value is then transformed by the AO40-N into a value between 0...21 mA.

- Output module for the connection of analog actuators
- Complete galvanic isolation
