

# Isolating transducer 1-channel IM12-AI01-1I-2IU-H0/24VDC/CC

The isolating transducers IM12-AI01-1I-2IU-H0/24VDC/CC transmit analog measured signals galvanically isolated. The devices are suitable for operation in zone 2.

The 1-channel device has one input for the operation of HART® 2-wire transducers as well as active and passive HART® 2-wire transmitters. Connection is via removable spring type terminals.

The device is equipped with a 4...20 mA input circuit and two 4...20 mA output circuits (either as source or sink) or 1...5 V (source). The input signal at input [I1] is transmitted 1:1 to outputs [O1] and [O2] within a range of 3.8 mA...20.5 mA without interference (splitter operation). In addition, digital signals can also be transmitted bidirectionally in accordance with the HART® protocol. Digital HART® signals are only transmitted to output [O1].

Wire break (< 3.5 mA) and short circuit (> 22 mA) in the transducer circuit are output as current < 3.5 mA/voltage < 0.875 V.

The devices have a green power LED (Pwr). For each input circuit there is a red status LED. An error in the input circuit causes the red LED to flash according to NE44.

The device can be used in safety circuits up to SIL2 (high and low demand according to IEC 61508) and meets the requirements of NE21.

The device is equipped with removable spring-type terminals.
