

Frequency Transducer/Pulse Counter 1-channel IMX12-FI01-1SF-1I1R-C0/24VDC

The frequency transducer/pulse counter IMX12-FI01-1SF-1I1R-C0/24VDC is equipped with intrinsically safe input circuits and transmits frequency signals up to 20,000 Hz electrically isolated from the at-risk area to the safe area. In addition, limits, slip or clockwise/counter-clockwise rotation can be monitored. The devices are suitable for operation in zone 2.

The 1-channel device is equipped with two intrinsically safe inputs for the connection of sensors acc. to EN 60947-5-6 (NAMUR). On the output side, there is a 0/4...20 mA current output and a normally open relay.

The device is parameterized via FDT and IODD with a PC. The current output can be set to 0/4...20 mA (source or sink optional). In accordance with the parameterization (E1, E2, E1-E2 or E2-E1), the input signals are provided as a 0/4...20 mA standard current signal. With the NO relay, either a limit value can be monitored on over/undershoot or a window. The start-up delay SUD is turned on via input E1, E2 or E3.

The devices have a green power LED (Pwr) and a red LED to indicate internal faults. For the input circuit there is a yellow and red status LED available. A fault in the input circuit leads to a flashing red LED according to NE44 and an internal fault to a steady read LED. The fault current can be adjusted to < 3.5 mA or > 21.5 mA. A yellow LED indicates the switching state of the limit value relay. A yellow LED indicates that the start-up delay is turned on.

The device can be used in safety circuits up to SIL 2 (high and low demand according to IEC 61508) and meets the requirements of NE21. It is equipped with removable screw terminals.

The device is equipped with removable screw terminals.
