Wiring diagram
Functional principle

These lights have RGB LEDs. Four input signals enable one of seven predefined colors to be controlled when using the standard settings, with an optional flashing function if required. The logic table shows which input needs to be connected. Using the Pro Editor software, the advanced settings allow these lights to be assigned up to 14 predefined colors. The major advantage of these LEDs is the color fidelity and luminance. Compared to their predecessors, a large number of variants can be produced with just a single light. The wiring diagram shows a PNP pin assignment.
