

K50APTWXDQ Pick-to-Light – Placement Sensor Capacitive Button

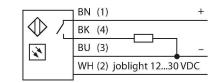

Туре	K50APTWXDQ
ID	3088601
Signal and display data	
Purpose	Pick-to-Light
Function	Touch Button
Switch Function	Momentary
Features of color 1	White, Permanently on
Special features	I/O module-compatible Wash down
Electrical data	
Operating voltage	1230 VDC
DC rated operational current	≤ 150 mA
Max. current consumption per color	75 mA
Output function	NO contact, PNP
Output function Input type	NO contact, PNP PNP
- <u> </u>	· · · · · · · · · · · · · · · · · · ·
Input type	PNP
Input type Response time typical	PNP
Input type Response time typical Mechanical data	PNP < 50 ms
Input type Response time typical Mechanical data Design	PNP < 50 ms Dome, K50
Input type Response time typical Mechanical data Design Dimensions	PNP < 50 ms Dome, K50 Ø 50 x 66 mm

Features

- ■Protection class IP67
- Male M12 x 1, 4-pin
- ■Job light: white
- Mispick: -
- Trigger light: -
- Operating voltage 12...30 VDC
- ■PNP switching
- ■NO contact

Wiring diagram

Functional principle

The K50 pick-and-place sensor is suitable for many mounting and component placement applications. The green work light or other signal lights are reflected perfectly by the entire dome (depending on the version). The transistor output can be easily connected to a system control, which is programmed for a special task sequence. The work light of the sensor is located in or next to every bin at the operator's workstation and indicates: 1. The bins with the components to be picked up for a particular work step and 2. the

sequence in which the components have to be picked up. If the operator removes a part from the bin, the K50 detects the hand in the bin and sends a signal to the control unit. The system then checks if the correct component has been picked up and - depending on the configuration - switches the corresponding work light off and the next one on, according to the assembly sequence. The work sequence control leads to increased efficiency, improved quality control and reduces rework and testing expenses. The term work light therefore refers to the visual indicator of the bin from which a part should be removed next. The actuation indicator confirms the removal with a different color. The mispick indicator illuminates if a bin was reached into when the work light was not
