Wiring diagram

Functional principle

The S22 pick-and-place sensor is suitable for many mounting and component placement applications. The device has RGB LEDs and, depending on the version, between one and seven display colors that are activated depending on the input. The display colors for each input can be individually configured using the Pro Editor software. It is also possible to configure the pick-and-place sensor as NO or NC, with or without holding function. The major advantage of these LEDs is the color fidelity and luminance. Compared
