### Wiring diagram

### Functional principle

The DX80 serial radios transfer data via RS232 or RS485 interface. The following choices are possible: Point-to-Point, star, or tree. Each network consists of a master and at least one slave. Repeaters extend the radio range. The device type is determined via internal DIP-switches. The baud rate is also adjustable, and can be up to 115.2 kBd. There is no software required to connect and adjust the devices.
