Wiring diagram

Functional principle

Ultrasonic sensors capture a multitude of objects contactlessly and wear-free with ultrasonic waves. It does not matter whether the object is transparent or opaque, metallic or non-metallic, firm, liquid or powdery. Even environmental conditions such as spray, dust or rain hardly affect their function. The sonic cone diagram indicates the detection range of the sensor. In accordance

with standard EN 60947-5-2, quadratic targets in a range of sizes (20 × 20 mm, 100 × 100 mm) and a round rod with a diameter of 27 mm are used.

Important: The detection ranges for other targets may differ from those for standard targets due to the different reflection properties and geometries.

Mounting instructions

Mounting instructions/Description

Smin coverage teach-in-range blind zone sonic cone object

Setting the limit values

The ultrasonic sensor features two switching outputs with teachable switching ranges. The adjustments can either be made via the Easy-Teach adaptor or via the buttons (please note, only the RU...U-M...E-2UP8X2T-H1151 types have buttons). The green and yellow LEDs indicate whether the sensor has detected the object.

Various functions can be taught, such as single switchpoint, window mode or reflection mode to a fixed target. Further information is described in the operating instructions. How to set the window mode by teaching two limits is described below. These two limits form the switching window and can be selected freely within the detection range.

Select Teach Out1	GND/T1 > 2 s Start teaching Out1	ED GN YE flashes alternating

Easy-Teach

• Connect teach adaptor TX1-Q20L60 between the sensor and connection cable.

- Position the object for the first limit value.
- Press and hold the button against Gnd for 2 or 8 s to select output 1 or 2.
- Press and hold the button against Gnd for 8 s to teach the first limit value.
- Position the object for the second limit value.
- Press and hold the button against Gnd for 2 s.

Teach button (please note, only the RU...U-M...E-2UP8X2T-H1151 types have buttons).

- Position the object for the first limit value.
- Press and hold button 1 against Gnd for 2 or 8 s to select output 1 or 2.
- Press and hold button 1 for at least 8 seconds.
- Position the object for the second limit value.
 Press and hold button 1 for 2 seconds.

After a successful teach-in, the sensor automatically runs in normal operating mode. Unsuccessful teach-in is signaled by the LED flashing slowly at a frequency of 5 Hz.

LED response

Successful teach-in is indicated by a fast flashing green LED. The sensor then automatically runs in normal operating mode. Unsuccessful teach-in is indicated by the LED flashing alternately green and yellow. In normal operating mode, both LEDs signal the switching state of output 1.

• Green: Object within the detection range but not in switching range

- · Yellow: Object within the switching range
- Off: Object outside the detection range
