Wiring diagram
Functional principle

The K50 pick-and-place sensor is suitable for many mounting and component placement applications. The LED light is reflected perfectly by the entire dome. The device has two display colors depending on the version: Color 1 Shows the disabled state, color 2 the enabled state. Since the device has no inputs, a color change is exclusively realized

Technical data

by touching the sensor (enable). Devices with a hold function keep the enabled state, even when the contact ends.
