

K50APFF50GRYC3QPMA Pick-to-Light – Placement Sensor Diffuse Mode Sensor with Fixed-field Background Suppression

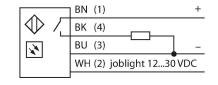

K50APFF50GRYC3QPMA

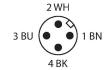

Features

- Protection class IP67
- ■PUR cable with M12 × 1 male connector, 4pin, 150 mm
- Fixed background suppression at 50 mm
- ■Job light, green
- ■Mispick, red
- ■Actuation, yellow
- Operating voltage 12...30 VDC
- ■PNP switching
- ■NO contact

Wiring diagram

Technical data

Type

туре	KOUAPFFOUGRYCOUPINA		
ID	3079031		
Signal and display data			
Purpose	Pick-to-Light		
Function	Diffuse mode sensor with fixed-field back- ground suppression		
Max. range	50 mm		
Light type	IR		
Number of beams	1		
Switch Function	Momentary		
Features of color 1	Green, Permanently on		
Features of color 2	Red		
Features of color 3	Yellow		
Special features	I/O module-compatible Wash down		
Electrical data			
Operating voltage	1230 VDC		
DC rated operational current	≤ 150 mA		
Max. current consumption per color	90 mA		
Output function	NO contact, PNP		
Input type	PNP		
Response time typical	< 10 ms		
Mechanical data			
Design	Dome, K50		
Dimensions	Ø 50 x 56.8 mm		
Housing material	Plastic, PC, Black		

Functional principle

The K50 pick-and-place sensor is suitable for many mounting and component placement applications. The green work light or other signal lights are reflected perfectly by the entire dome (depending on the version). The transistor output can be easily connected to a system control, which is programmed for a special task sequence. The work light of the sensor is located in or next to every bin at the operator's workstation and indicates: 1. The bins with the components to be picked up for a particular work step and 2. the sequence in which the components have to be picked up. If the operator removes a part from the bin, the K50 detects the hand in the bin and sends a signal to the control unit. The system then checks if the correct component has been picked up and - depending on the configuration - switches the corresponding work light off and the next one on, according to the assembly sequence. The work sequence control leads to increased efficiency, improved quality control and reduces rework and testing expenses. The term work light therefore refers to the visual indicator of the bin from which a part should be removed next. The actuation indicator confirms the removal with a different
