Wiring diagram

Functional principle

Ultrasonic sensors capture a multitude of objects contactlessly and wear-free with ultrasonic waves. It does not matter whether the object is transparent or opaque, metallic or non-metallic, firm, liquid or powdery. Even environmental conditions such as spray, dust or rain hardly affect their function. The sonic cone diagram indicates the detection range of the sensor. In accordance with standard EN 60947-5-2, quadratic targets in a range of sizes (20 × 20 mm, 100 × 100 mm) and a round rod with a diameter of 27 mm are used.

Important: The detection ranges for other targets may differ from those for standard targets due to the different reflection properties and geometries.

Mounting instructions

Mounting instructions/Description

green and yellow LEDs indicate whether the sensor has detected the object. One switching point is taught. This must be within the detection range. In this operating

mode the background is suppressed.

Setting the switchpoint

Teach

• Connect the teach adaptor between the sensor and connection cable

The ultrasonic sensor features a switching output with a teachable switching point. The

- Position the object at the beginning of the protection area
- Press the button for 2 7 sec against Ub
 Place object at the end of the switching range
 Press the button against Ub for 8 11 seconds

After a successful teach-in, the green LED flashes at 2Hz and the sensor runs automatically in normal mode.

LED response

In standard operating mode, the two LEDs indicate the switching state of the sensor. • Green: Object within the detection range but not in switching range

• Yellow: Object is within the switching range • Off: Object is outside the detection range or signal loss
