

# Glass Fiber Single Conductor IT23SM8

- Operating mode: Opposed mode sensor
- Stainless steel jacket, flexible
- Operating temperature of fiber-optic jacket: -140...+249 °C
- End sleeve for probe, M8 × 1.25 threaded
- Optical fiber, bundle diameter: 3.2 mm
- Optical fiber, total length: ± 914 mm

### Functional principle

Glass or plastic fibers are the optimum choice for high-temperature applications and limited spaces. They transfer the light from the sensor to a remote object. Individual fibers are used for opposed mode sensing, whereas bifurcated fibers are suited for retroreflective or diffuse mode operation.
