## T303EQ1 Photoelectric Sensor – Opposed Mode Sensor (Emitter)

# The second of th

#### Technical data

Туре	T303EQ1
ID no.	3033445
Optical data	
Function	Opposed mode sensor
Operating mode	Emitter
Light type	IR
Wavelength	950 nm
Range	060000 mm
Electrical data	
Operating voltage	20250 VAC
Readiness delay	≤ 100 ms
Response time typical	< 16 ms
Mechanical data	
Design	Rectangular with thread, T30
-	
Dimensions	Ø 30 x 45 x 40 x 64 mm
Dimensions Housing material	Ø 30 x 45 x 40 x 64 mm  Plastic, Thermoplastic material
Housing material	Plastic, Thermoplastic material
Housing material Lens	Plastic, Thermoplastic material plastic, Acrylic
Housing material  Lens  Electrical connection	Plastic, Thermoplastic material plastic, Acrylic Connectors, 1/2", PVC
Housing material  Lens  Electrical connection  Number of cores	Plastic, Thermoplastic material plastic, Acrylic Connectors, 1/2", PVC
Housing material  Lens  Electrical connection  Number of cores  Ambient temperature	Plastic, Thermoplastic material plastic, Acrylic Connectors, 1/2", PVC 4 -40+70 °C
Housing material  Lens  Electrical connection  Number of cores  Ambient temperature  Protection class	Plastic, Thermoplastic material plastic, Acrylic Connectors, 1/2", PVC 4 -40+70 °C IP69 Encapsulated
Housing material  Lens  Electrical connection  Number of cores  Ambient temperature  Protection class  Special features	Plastic, Thermoplastic material plastic, Acrylic Connectors, 1/2", PVC 4 -40+70 °C IP69 Encapsulated Wash down
Housing material  Lens  Electrical connection  Number of cores  Ambient temperature  Protection class  Special features  Power-on indication	Plastic, Thermoplastic material plastic, Acrylic Connectors, 1/2", PVC 4 -40+70 °C IP69 Encapsulated Wash down LED, Green

#### **Features**

- ■M12 × 1 male connector, 4-pin
- Protection classes IP67/IP69K
- ■Ambient temperature: -40 °C...+70 °C
- Operating voltage: 20...250 VAC

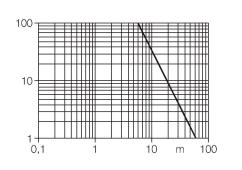

### Wiring diagram

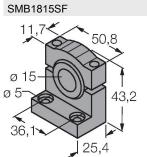

#### Functional principle

Opposed mode sensors consist of an emitter and receiver. They are installed opposite to each other so that the light from the emitter is aimed directly at the receiver. When an object interrupts or weakens the light beam, the sensor switches. Opposed mode sensors are the most reliable photoelectric sensors for detection of opaque targets. The excellent light/dark contrast and the high excess gain allow operation over larger distances and under difficult conditions.

Excess gain curve Excess gain in relation to the distance
